

Gurock Software announces release of SmartInspect

PADERBORN, Germany - June 15th, 2005 - Gurock Software, a German startup specialized in software development tools, announces the release of SmartInspect. SmartInspect is an advanced logging tool for debugging and monitoring .NET, Java and Delphi applications. It significantly simplifies and improves the way developers, testers and support engineers create, maintain and support software applications.

SmartInspect helps software development teams to identify bugs, find solutions to customer problems and gives a clear understanding of how their software works in different environments and under different circumstances. Even where regular debuggers fail, SmartInspect makes it possible to easily debug distributed systems, multi-threaded applications and software on production systems.

Gurock Software ships SmartInspect with three native libraries for .NET, Java and Delphi. Full source code and an extensive online manual are included for all libraries. The powerful viewer application, the SmartInspect Console, makes it possible to easily analyze applications that use one of the libraries. It provides tools to view, filter and edit all log messages that are generated by your applications.

SmartInspect provides many benefits to development teams, support engineers and testers. By using this advanced logging tool you are able to reduce time-to-market of your software products, decrease the overall development costs and deliver more robust and reliable software. Testers and support engineers use it to decrease response time to customer requests, detect defects and develop workarounds, whereas developers benefit from the additional assistance while creating increasingly complex software applications.

SmartInspect can be ordered directly from Gurock Software's website for \$229 (US) per user. A 30-days fully functional trial version is available for download. A review license can be requested by interested press representatives at no cost.

About Gurock Software: Gurock Software is a small ISV (independent software vendor) located in Paderborn, Germany. The company has been founded by the two brothers Tobias Gurock and Dennis Gurock in 2004. Gurock Software is developing shrink-wrapped software tools for developers. As the company founders are software developers themselves, they understand the needs of their customers very well. Gurock Software delivers professional, cost-effective and time-saving solutions to software developers world-wide.
