

New version of advanced logging tool for .NET, Java and Delphi released

PADERBORN, Germany – August 22nd, 2005 – Gurock Software, a German startup specialized in software development tools, announces the release of the new SmartInspect version 1.1. SmartInspect is an advanced logging tool for debugging and monitoring .NET, Java and Delphi applications. The new version of SmartInspect includes many changes to increase the productivity of software developers, testers and support engineers.

Log files created with one of the native SmartInspect libraries can now be accessed while in use. This enables users to open or copy log files without interrupting mission-critical software applications. This makes SmartInspect attractive even for high-availability environments. Another new feature is the Reset Callstack functionality. This feature allows users to reset the callstack of a log at any point to correct the method hierarchy in case of a logged error. This is an often requested functionality to give users more control over their log files.

Another addition in this release is the functionality to use multiple filter values for views and AutoView rules. This makes it easier for SmartInspect users with complex applications and distributed systems. New meta information like item indexes, item counts and image resolutions make it easier to use the various views.

Among many additional small changes, the interface of the SmartInspect Console has been overhauled to include new usability additions and to represent the new SmartInspect product design. Great attention has been given to user requests to make SmartInspect more easy to use and useful.

SmartInspect helps software development teams to identify bugs, find solutions to customer problems and gives a clear understanding of how their software works in different environments and under different circumstances. Even where regular debuggers fail, SmartInspect makes it possible to easily debug distributed systems, multi-threaded applications and software on production systems.

The new SmartInspect version can be ordered directly from Gurock Software's website for \$229 (US) per user. Registered customers can download the new version at the My Gurock.com portal for free. A 30-days fully functional trial version is available for download. A review copy can be requested by interested press representatives at no cost.

About Gurock Software: Gurock Software is a small ISV (independent software vendor) located in Paderborn, Germany. The company has been founded by the two brothers Tobias Gurock and Dennis Gurock in 2004. Gurock Software is developing shrink-wrapped software tools for developers. As the company founders are software developers themselves, they understand the needs of their customers and deliver the tools they need. Gurock Software offers professional, cost-effective and time-saving solutions to software developers world-wide.
