## Advanced logging tool gets support for .NET 2.0 and Eclipse

**PADERBORN, Germany – November 2nd, 2005** – Gurock Software, a German startup specialized in software development tools, announces the release of the new SmartInspect version 1.2. SmartInspect is an advanced logging tool for debugging and monitoring .NET, Java and Delphi applications. The major new features of SmartInspect 1.2 are support for .NET 2.0, Eclipse 3.x integration and the new Redistributable Console.

The new Redistributable Console is a feature-reduced version of the full SmartInspect Console and can be shipped to end-users royalty-free. This enables SmartInspect customers to ship a modern and feature rich log viewer application to their users. By using the Redistributable Console, end-users can monitor their systems, identify configuration problems and solve simple issues by themselves.

Microsoft just released .NET 2.0 and Visual Studio 2005 and Gurock Software is following with complete support for these platforms. SmartInspect 1.2 includes a new .NET 2.0 compatible library ready for production use. Additionally, the SmartInspect setup now integrates SmartInspect automatically into the Visual Studio 2005 IDE.

Eclipse is a leading IDE for Java and other development platforms. Gurock Software is happy to introduce support for Eclipse 3.x with SmartInspect 1.2. The SmartInspect setup automatically generates an appropriate user library ready for import into Eclipse. This semi-automatic integration makes it even easier to use SmartInspect with Eclipse 3.x.

Besides usability enhancements and improved library performance, all SmartInspect libraries now include a new Active property for session objects. This feature allows developers of server software and web applications to selectively enable and disable logging for each connected user or client in real-time.

The new SmartInspect version can be ordered directly from Gurock Software's website for \$229 (US) per user. Registered customers can download the new version at the My Gurock.com portal for free. A 30-days fully functional trial version is available for download. A review copy can be requested by interested press representatives at no cost.

**About Gurock Software:** Gurock Software is a small ISV (independent software vendor) located in Paderborn, Germany. The company has been founded by the two brothers Tobias Gurock and Dennis Gurock in 2004. Gurock Software is developing shrink-wrapped software tools for developers. As the company founders are software developers themselves, they understand the needs of their customers and deliver the tools they need. Gurock Software offers professional, cost-effective and time-saving solutions to software developers world-wide.
