

## SmartInspect 1.3 with log level and BDS 2006 support released

**PADERBORN, Germany – January 16th, 2006** – Gurock Software, a German startup specialized in software development tools, announces the release of SmartInspect 1.3. SmartInspect is an advanced logging tool for debugging and monitoring .NET, Java and Delphi applications. SmartInspect 1.3 includes major new features like complete log levels and support for BDS and Delphi 2006.

The log level support in the SmartInspect libraries enables developers to categorize log entries into groups and selectively enable and disable them. This gives developers complete control over the granularity of created log files and can help reducing unneeded log messages. It is possible, for example, to log only errors and warnings in case of a software failure to identify and solve software issues faster.

Borland Delphi and Borland BDS are popular development environments that support the Delphi and C# languages, among others. Gurock Software includes support for the new IDE versions in SmartInspect 1.3 and provides new library files, live templates, project files and automated IDE integration.

The new SmartInspect release also includes code templates and snippets for a variety of development environments. Code templates and snippets are a great assistance and time-saver when writing source code in modern editors. SmartInspect 1.3 ships with code templates and snippets for Microsoft Visual Studio, Borland Delphi, Borland BDS 2006 and Eclipse.

Besides other new features and bug fixes in this SmartInspect version, SmartInspect 1.3 comes with a Reload Last Log File functionality to refresh a log file with just one key press, the new LogColored method for easier differentiating of important messages and a new event for filtering log entries.

The new SmartInspect version can be ordered directly from Gurock Software's website for \$229 (US) per user. Registered customers can download the new version at the My Gurock.com portal for free. A 45 days fully functional trial version is available for download. A review copy can be requested by interested press representatives at no cost.

**About Gurock Software:** Gurock Software is a small ISV (independent software vendor) located in Paderborn, Germany. The company has been founded by the two brothers Tobias Gurock and Dennis Gurock in 2004. Gurock Software is developing shrink-wrapped software tools for developers. As the company founders are software developers themselves, they understand the needs of their customers and deliver the tools they need. Gurock Software offers professional, cost-effective and time-saving solutions to software developers world-wide.
